Bengaluru, Karnataka, India

## SUMMARY

Senior Software Engineer with 6 yearsof building distributed, event-driven backend systems in FinTech and investment banking using Java, Spring Boot, and Apache Kafka. Strong foundation in microservices, REST APIs, Multithreading, and high-throughput stream processing, with end-to-end production ownership of mission-critical trade platforms at Morgan Stanley. Practical experience with AI assisted development workflows (GitHub Copilot, Claude desktop). Passionate about delivering high-performance, reliable solutions that drive measurable business impact. Agile/Scrum methodologies with proven success in delivering production-ready solutions.

## TECHNICAL SKILLS

**Languages**: Java 8/17, SQL

**Frameworks**: Spring Boot, Spring MVC, Spring Batch, JPA/Hibernate, Design Patterns, LLD, HLD, Multithreading

**Concurrency & Performance**: Multithreading, Completable Future, Asynchronous Processing, Caching

**Messaging & Streaming**: Apache Kafka, Event-Driven Architecture

**Databases:** Microsoft SQL Server

**Caching & Coordination:** Redis (Redisson), Idempotent Processing

**Architecture:** Microservices, REST APIs, Distributed Systems, event-Driven Architecture

**AI Integration:** Integration (Claude), AI-Assisted Development (GitHub Copilot)

**Tools & DevOps:** Jenkins (CI/CD), Bitbucket, GitHub, Postman, Gradle, Grafana, Prometheus, Datadog, Docker, Kubernetes, AWS, Swagger

**Testing & Quality Assurance**: JUnit, Mockito, Unit Testing

## EXPERIENCE

**Accenture | Packaged App Development Senior Analyst**

Jan 2024 · Present | Bangalore, India

**Project**: MarTech Adobe real time Data Ingestion - **PayPal**

The S2A (Sign up to activation) use case by streaming real time consumer signup data from PayPal through the server directly into Adobe Experience Platform.

- Designed and developed scalable RESTful microservices using **Java 8**, **Spring Boot**, **MySQL**, and **JPA**, supporting high-traffic consumer journeys and ensuring low-latency, fault-tolerant data ingestion.
- Developed backend services processing millions of events per day, reducing processing time by **~25%** through efficient chunking, retry mechanisms, cache mechanisms and parallel execution and ensuring backward compatibility.
- Integrated **Apache Kafka** for event-driven processing, enabling high-volume data handling and real time communication across services.
- Established comprehensive automated test coverage using **Mockito**, leading to a 35% reduction in production defects.
- Automated application delivery through Jenkins-based CI/CD pipelines with Docker, enabling zero-downtime deployments and reducing release time by 40%.
- Proactively monitored production services using Grafana and Datadog, identifying performance bottlenecks and maintaining 99.99% service availability.
- Engaged with DevOps teams to streamline deployment and monitoring processes for backend services hosted on AWS infrastructure.
- Actively participated in on-call rotations, monitored automated alerts, and resolved **P1** production incidents, often under tight SLAs, ensuring minimal customer impact and rapid service recovery.

**TCS | Software Engineer**

Sept 2020 – Jan 2024 | Bangalore, India

**Project**: Purchase And Sales Real Time – **Morgan Stanley**

Trading Microservices (Morgan Stanley) A microservices- based trading system enabling real-time buying and selling stocks in US markets, ensuring high reliability, low latency and scalable transaction processing.

- Played a key role as a **Java** backend engineer in an event-driven microservices architecture, delivering **12+** asynchronous RESTful APIs that enabled high-throughput, low-latency communication across distributed services.
- Integrated **Kafka Streams** for event-driven, real-time processing, enabling the system to handle hundreds of thousands of trade events per minute with predictable latency and fault tolerance.
- Applied strong object-oriented design principles to optimize business logic, reducing execution latency by **~20%** and improving scalability under peak trading loads.
- Implemented bulk and batch processing workflows capable of handling millions of trade records, optimizing memory usage and throughput to meet end-of-day reconciliation and reporting requirements.

## EDUCATION

**Adichunchangiri Institute of Technology**, Chikkamagaluru, Bengaluru, India
Bachelor of Engineering in Computer Science — Aug 2016 – Aug 2020
**Grade:** 7.81 CGPA
